

Internal Doors

Chosen with care. Hung to last.

Dunne Eco | great joinery, from our family to yours.

A good door is the kind of thing you stop noticing.

We have been fitting joinery across the midlands for years, and a door is the thing people only notice when it is wrong. One that sticks in damp weather. A hollow door that rattles every time the heating comes on. A finish that chips in the first week. You live with that every day.

A good door does none of that. It hangs straight, closes with a solid sound, and suits the room it is in. You stop thinking about it, which is the whole point.

We supply internal doors from Deanta, one of Ireland's best known door makers, with a range that runs from clean contemporary styles through to traditional panelled, glazed and solid timber. We also work with other trusted suppliers, so if you have a particular look in mind and you do not see it here, just ask.

Whether you are kitting out a new build or replacing tired doors one room at a time, we will help you get it right.

Contemporary & Flush Doors

Clean lines. No fuss. Built for a modern room.

Flush Primed

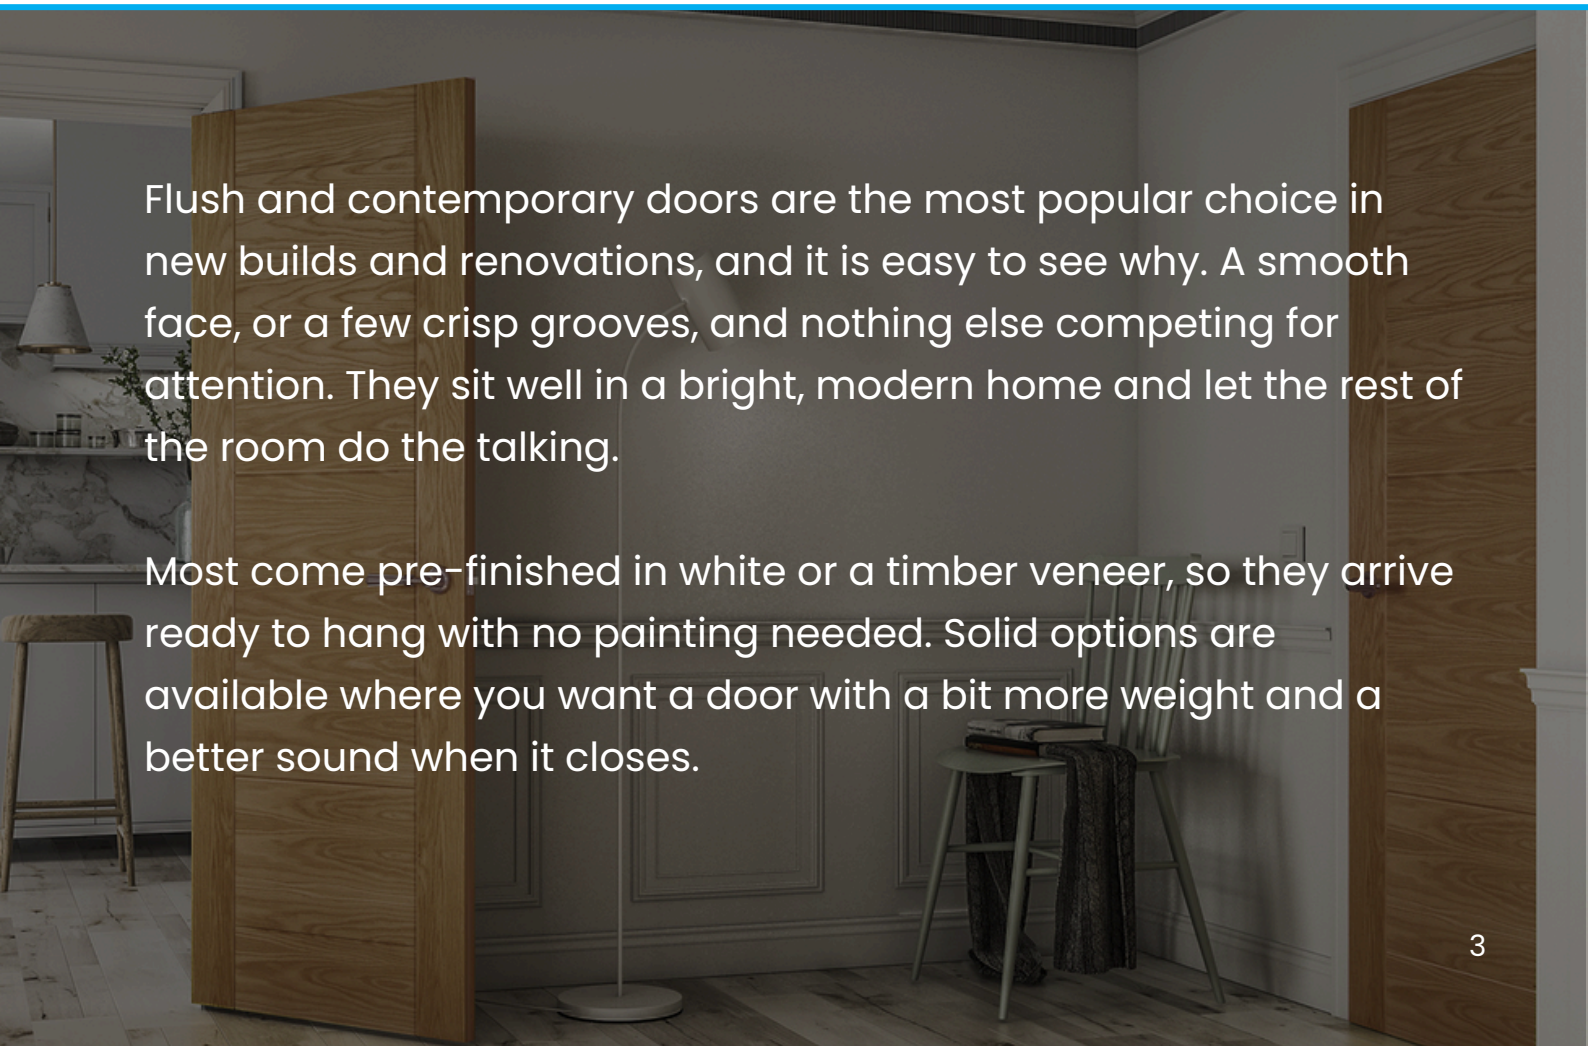

HP12 Light Grey Ash

HP22 Brushed Black

HP35 Oak

Flush and contemporary doors are the most popular choice in new builds and renovations, and it is easy to see why. A smooth face, or a few crisp grooves, and nothing else competing for attention. They sit well in a bright, modern home and let the rest of the room do the talking.

Most come pre-finished in white or a timber veneer, so they arrive ready to hang with no painting needed. Solid options are available where you want a door with a bit more weight and a better sound when it closes.

Panelled & Shaker Doors

Traditional shapes that suit an Irish home.

NM5 Primed (Shaker)

NM3 Walnut

NM8 Oak

WR2 Premier White

A panelled door brings a bit of character that a flat door cannot. The raised or recessed panels catch the light and give a room some depth, which is why they still suit older houses, cottages and any home going for a warmer, more traditional feel.

Shaker styles keep things simple, clean square panels and nothing more. A good middle ground if you want some detail without it taking over. Two, four and six panel layouts are all available.

Glazed Doors

Borrow light from the room next door.

NM6GC Oak

WR2G Primed

NM9G Walnut

HP12G Light Grey Ash

A glazed door is the quiet fix for a dark hallway or a back room that never gets the sun. The glass lets light pass between rooms without opening the space up completely, so a north-facing hall stops feeling like a tunnel.

The glass is where you set the balance between light and privacy. Clear for the most light and a straight view through, frosted where you want the light but not the view, or figured and reeded for a bit of texture in between.

Every glazed door we supply uses toughened safety glass as standard, so it's as safe near stairs and children as a solid door.

Crittall-Style Doors

The black-framed look, done properly.

NM33GBK (Clear)

NM33GRBK (Reeded)

NM31GC (Clear)

NM31GRBK (Reeded)

Named after the old steel-framed factory windows, Crittall-style doors have become one of the most wanted looks in modern Irish homes. Slim black frames, clean grid lines, plenty of glass.

They do the same job as any glazed door, moving light between rooms, but they make a feature of it. A run between a kitchen and living room, or closing off an open-plan space without losing the light, gives a room a sharp, modern edge.

Clear glass for the most light, or reeded for privacy with a bit of texture. Toughened safety glass as standard.

Clear

Frosted

Figured

Reeded

Glass Options

Privacy where you want it. Light where you need it.

Every piece of glass we fit is toughened safety glass, so a glazed door is as safe as a solid one. That matters most near stairs, in children's rooms, and anywhere a knock is likely.

Starting from a plain door? Glass can be added to suit. Deanta's designs run from simple bevelled panels to patterned options like Flora, Venice and Luma, so you can get a more decorative look without going fully bespoke. Ask us and we will show you the full range.

Clear: The most light and a clean view straight through. The pick where you want to borrow light from the next room and privacy is not a concern.

Frosted: Keeps the light but blocks the view. A solid choice for a bathroom, an ensuite, or an office off the hall.

Figured: A soft textured pattern that blurs the view while letting the light sparkle through. Sits between clear and frosted.

Reeded: Vertical fluted lines and a classic look that has come right back into fashion. Private, with the light passing through in soft stripes.

Satin Nickel

Matte Black

Brushed Gold

Barn Door Sliders

Big style, no swing space.

A barn door slides across the wall instead of swinging into the room, so it is the answer where a normal door has nowhere to open. Tight hallways, an ensuite off a bedroom, a utility or pantry where a swinging door would foul the space. It runs on a track above the opening and glides to the side.

They have become a real feature piece as much as a practical fix. The exposed track and roller become part of the look, so the hardware is meant to be seen rather than hidden.

The track comes in three finishes, satin nickel, matte black and brushed gold, to match your handles and the rest of the room. It carries doors up to 135kg, so a solid timber door is no bother, and every kit comes with the fittings needed to hang it.

Pocket Door Kit

A door that disappears into the wall.

A pocket door slides sideways into a cavity built into the wall, so when it is open the door vanishes completely. No swing into the room, no track on show, nothing. Just a clean opening you walk through.

It is the tidiest way to divide a space where a normal door has nowhere to go, an ensuite, a utility, or two rooms you want to open right up. Where a barn door makes a statement, a pocket door hides away entirely.

The kit runs on an aluminium track with smooth ball-bearing rollers, and comes with everything needed to hang it. The cavity is built into the wall, so it is one to plan for before the plastering goes in.

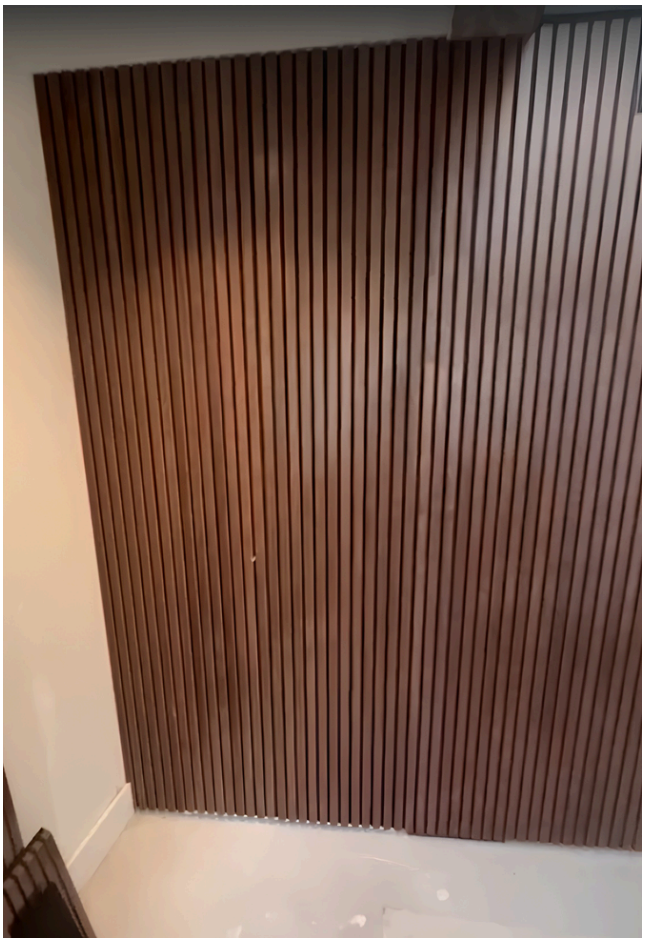

Hidden Door

A door you only see when you want to.

A hidden door sits flush with the wall and disappears into it. No architrave, no visible frame, no handle standing proud. Clad it in the same panelling or paint as the wall around it and the opening vanishes entirely.

They work where a normal door would interrupt a room. A study or utility off a living space, a door into a boot room, or anywhere a run of panelling would be spoiled by a door breaking it up. Push to open, and it swings like any other door.

It takes a concealed frame and hidden hinges to do it properly, so the door sits perfectly flush and the shadow line stays even all the way round. Get that wrong and it looks like a mistake rather than a feature. It is a job worth planning early, ideally before the wall goes up.

Fire Doors

The doors that buy you time.

A fire door is not about looks. It is about the minutes it holds back smoke and flame while everyone gets out.

It only works as a complete set, so we fit the door, a fire-rated frame, intumescent seals, certified hinges and a self-closing device together. Get one part wrong and the rating is gone, which is why it is worth having them fitted properly.

Where do you need one?

- The door from an integral garage into the house
- Halls and landings in three-storey homes
- Apartments
- Loft and attic conversions

We supply certified FD30 and FD60 doors, rated by the manufacturer, in styles that match the rest of your doors. FD30 holds fire for 30 minutes and suits most homes. FD60 gives 60 minutes, usually for apartments and commercial jobs.

Not sure if you need one? Tell us about the house and we will talk it through.

Frames, Linings & Mouldings

The bits around the door matter too.

Skirting & Architrave

Skirting runs along the floor, architrave frames the door. Get them in the same finish as your doors and the whole room pulls together, instead of looking like bits bought separately and made to fit.

We can match all four finishes: oak, white primed, walnut, and light grey ash. There's a range of profiles as well, from clean and square to more traditional mouldings, so it suits the house whether it's a new build or an older place.

Primed (Georgian)

Walnut (Shaker)

Oak (Tudor)

Grey Ash (Half Splayed)

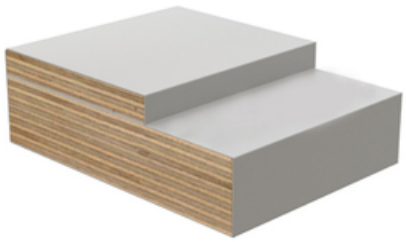

Frames, Linings & Mouldings

Door Frames

A frame is not something anyone notices, but it is what the door hangs on and closes against, so it is worth getting right. We fit rebated frames as standard. The doorstop is machined into the frame itself rather than nailed on afterwards, which gives a cleaner line and a solid stop that will not work loose over the years.

Our standard frame is white primed, ready to paint to match your walls and architrave. Oak, walnut and other prefinished options are available to order if you want the frame to match a timber door. Frames come in standard widths from 103mm to 132mm to suit most wall build-ups. We can go narrower or wider than that for an awkward wall, with a small charge for the custom size.

Fire doors need a fire-rated frame with a deeper rebate and a groove for the intumescent strip. We supply these to match, so the whole fire set goes in as one. More on that back on the fire doors page.

Rebated (Primed)

Fire Rebated (Oak)

Slip Stop(Walnut)

Standard Door Sizes

Standard internal doors are 44mm thick. FD30 fire doors are also 44mm. FD60 fire doors are thicker at 55mm, to hold fire for the full sixty minutes.

Size (mm)	Imperial	Thickness
2032 x 864	34" x 80"	44mm
2032 x 813	32" x 80"	44mm
1981 x 762	30" x 78"	44mm
1981 x 711	28" x 78"	44mm
1981 x 660	26" x 78"	44mm
1981 x 610	24" x 78"	44mm

Handles & Hardware

The part you put your hand on every day.

A door is judged on its handle as much as anything, because it is the bit you actually touch. We fit the full Deanta hardware range and match it across the house, so every room feels of a piece rather than thrown together.

Aran (Chrome Plated)

Inishmore (Black Graphite)

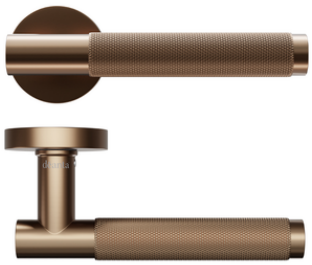

Blasket (Satin Nickel)

Abbey (Antique Brass)

Soho (Matt Black)

Roma (Dark Rose Gold)

Handles come in a range of styles and finishes, from satin nickel and black to brushed brass, in lever and knob designs to suit the door. Pick one finish and we carry it through every room, handles, hinges and latches, so nothing clashes.

These are a sample of our Deanta handles, and we stock other makes too! See the full range in our Tullamore showroom. Give us a call before you visit and we will have someone there to look after you.

Accessories

The small things that finish a door.

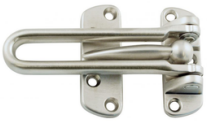

The bits nobody thinks about until they are missing. Stops, bolts, viewers, hooks and pulls, all in finishes to match your handles. What follows is a sample of the Deanta range, and we can source plenty besides.

Flush Bolt (Square)

Flush Bolt (Radius)

Door Guard

Door Security Chain

Cabin Hook w/ Fixings

Magnetic Door Stopper

Door Viewer

Coat Hook

Traditional Nightlatch

Toilet Door Release

Door Stop (Wall)

Door Stop (Floor)

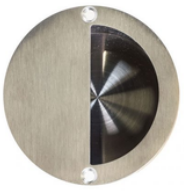

Antique Style Escutcheons

Flush Pull

Flush Pull Ring

Circular Flush Pull

WR1

WR2

Acoustic (Oak)

Acoustic (Black)

Wall Panelling

Give a plain wall something to say.

Panelling turns a flat wall into a feature, and it is one of the cheapest ways to lift a hallway, a stairwell or a bedroom wall. Both of our decorative options come as a pack of beading and board lengths that fix straight to the wall, ready to paint in whatever colour you like.

WR1 is the classic look, slim boards and fine beading, the sort of panelling you would find in an older Irish house. It suits a hall, a stairs or a period room.

WR2 takes the same idea with a heavier, more modern profile, matched to the WR2 door so panelling and door can run together in the same room. It makes more of a statement.

Acoustic panelling
Immerse acoustic panelling is a different thing altogether. Oak slats on a sound-absorbing black felt backing, prefinished and ready to fix. It warms up a room visually and takes the echo out of it, which is why it turns up in home offices, media rooms, and anywhere with hard floors and bare walls. Available in oak, walnut, black and light grey ash.

Finishes

Pre-finished or primed, your call.

Pre-finished

Pre-finished doors arrive sealed and ready to go, lacquered timber or factory-painted white. They look right from the day they are hung and there is no painting, no drying time and no dust. For most people this is the easy choice.

Primed

Primed doors come ready for paint, so you can match them to a wall colour or a scheme you already have in the house. A bit more work on site, but full control over the final colour.

How It Works

No guesswork. No wrong sizes. No trips back.

1. Get in touch.
Call us, email us, or fill in a quote request on dunneeco.ie. Tell us roughly what you are after and we will take it from there.

2. We come to you.
As soon as we have the price agreed, we arrange a time to call out, measure your openings properly before we proceed with the manufacturing.

3. We place the order.
Once you are happy with the spec, we order your doors and everything that goes with them. Standard or made to your sizes.

4. We hang and fit.
When everything arrives we come back and fit it: doors hung, frames and architrave in, handles on, and the openings left clean. We check every door swings and closes right before we leave.

Frequently Asked Questions

How long does it take from order to fitting?

Lead times depend on the door, the finish and whether the sizes are standard, but most orders are turned around within a few weeks. We will give you a firmer timeframe when you order.

Can I order just one door?

Yes. There is no minimum order. Plenty of people come to us for a single awkward opening they have not been able to sort elsewhere.

Do I really need a fire door, and where?

In some spots the building regs require them, like the door from an integral garage, halls in three-storey homes, apartments and attic conversions. Tell us about the house and we will tell you where you need one.

Do you supply only, or fit as well?

Both. If you would rather hang the doors yourself we can supply them to your sizes. Most people prefer us to handle the lot, but the choice is yours.

Do you supply jobs for commercial jobs too?

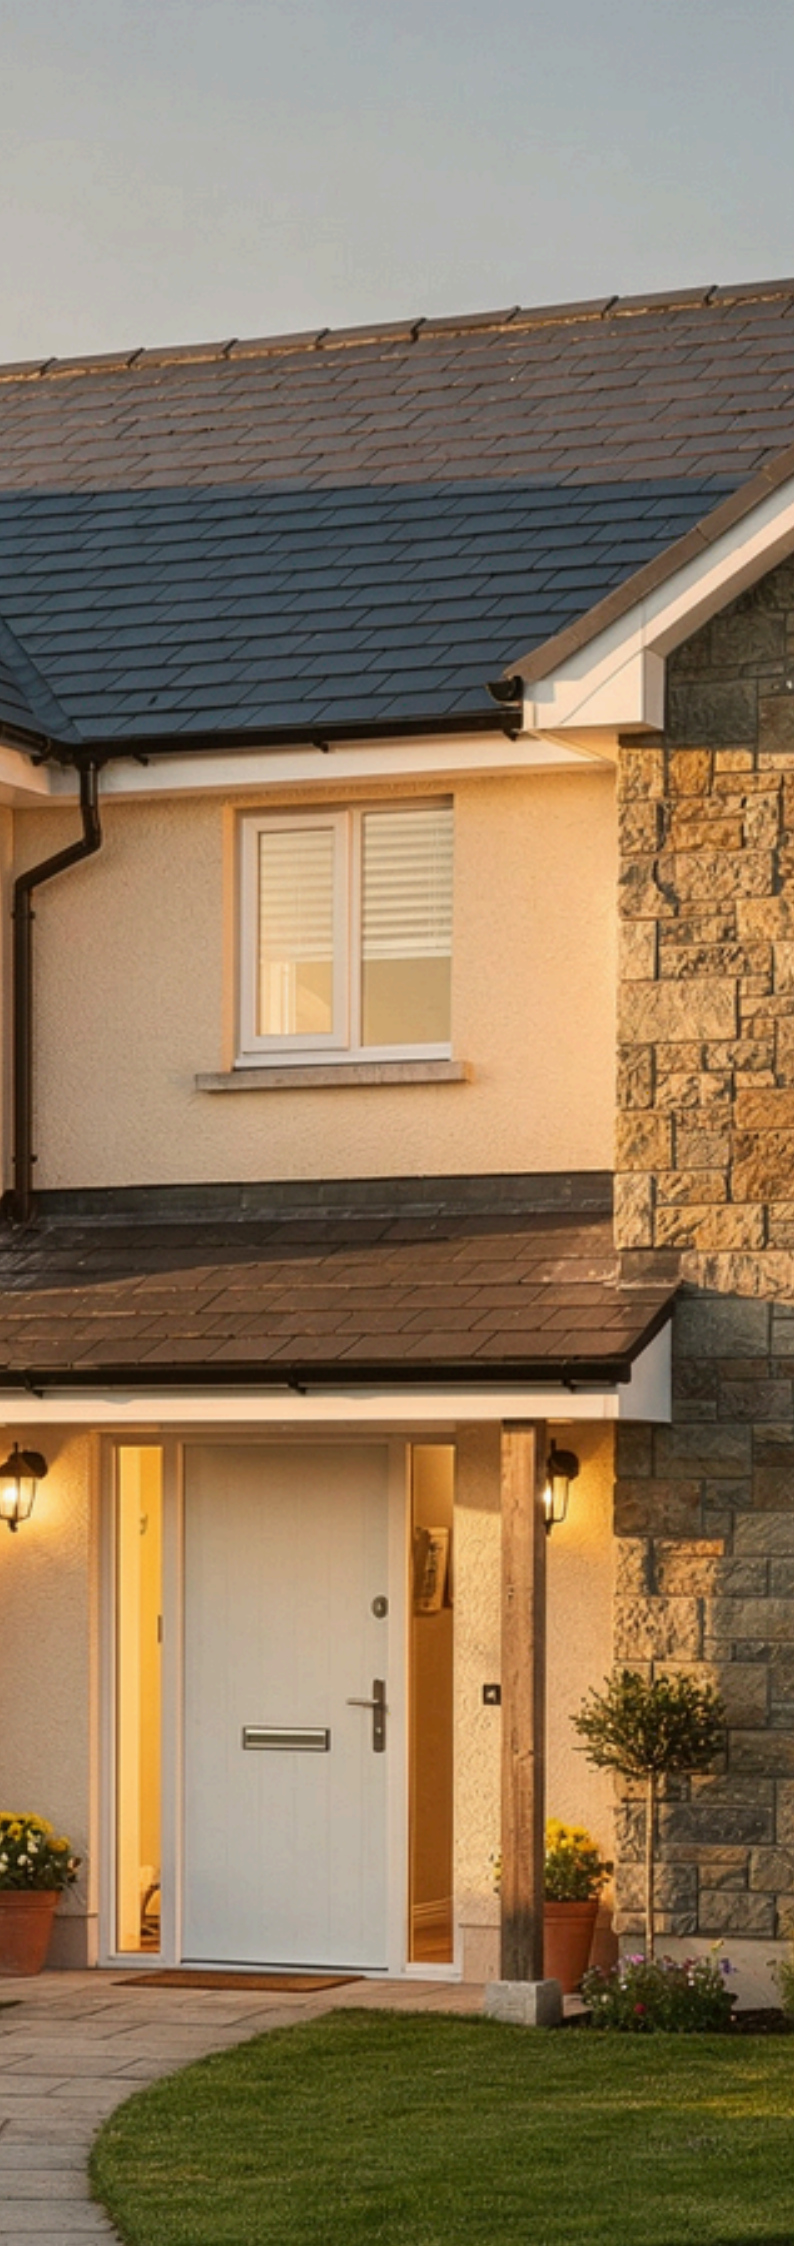

Yes. We fit doors in offices, schools and commercial buildings. Fire doors, closers and heavier hardware are all part of what we do.

Do the doors come finished or do I need to paint them?

That is up to you. Pre-finished doors arrive sealed and ready to hang. Primed doors are ready for you to paint to your own colour. We will talk you through which suits you.

What if something goes wrong after fitting?

Call us. We stand behind what we fit. If there is a fault with the product or the installation, we come back and sort it.

Why Dunne Eco?

We are a family business based in Tullamore. We have been in joinery for a long time and we know our product. When you call us, you talk to someone who can actually help.

Every door we supply is measured, ordered and fitted by us. From choosing the style to hanging it straight, we handle the lot, so you do not need to worry about getting it wrong.

We also supply blinds, stairs and windows. So if you are fitting out a new build or doing a full renovation, we can help with a good deal more than just the doors!
