Aluminum facades - Curtain walls

AL-TECH offers curtain walls / aluminum facades for the construction of glazed building facades, as well as other spatial structures and roof glazing. Our curtain walls are manufactured based on the Aluprof and Aliplast systems designed with this in mind. We offer a mullion-transom system or a system of modular walls. We provide a wide selection of glazing, including reflective glass, thermal insulation, acoustic and Venetian glass. The high static parameters of the aluminum profiles we use allow us to make curtain walls in any shape.

We offer aluminum facades with a varied structure and external appearance (soft-line effect, a uniform glass surface, highlighting - in the external view - horizontal and vertical divisions, forms similar to the structural wall).

Aliplast MC-Wall

- The system is intended for the design of modern curtain walls with simple and complex shapes.
- The curtain wall of the MC-Wall system consists of vertical mullions and horizontal transoms connected with each other by means of pins made of stainless steel.
- A wide range of mullions and transoms is available, adapted to static requirements.
- A wide range of masking strips allows for obtaining varied visual effects for a curtain wall.
- The visual width of the mullion-transom: 55 mm
- Thermal insulation - heat transfer coefficient for profiles U = 1.616-2.815 W / m²K, material group 2.1 according to DIN 4108
- Thermal break - polyamide reinforced with multi-directional glass fiber
- Very high load-bearing capacity of the mullion-transom connection both in the wind pressure plane and in the plane loaded with the glass, thanks to the use of 2 or 3 stainless steel ø6 fasteners per one node
- Possibility to use traditional bolt supports and to fix them only with screws from the front
- At the profile production stage, the bolts are insulated by a thermal break clamped by Aliplast, which eliminates possible errors during the subsequent installation of the break.
- The use of a bolt integrated with a thermal break additionally speeds up the assembly of the facade wall

The choice of a spacer depends on the thickness of the filling in the curtain wall

Dunne ECO

Windows to suit your style

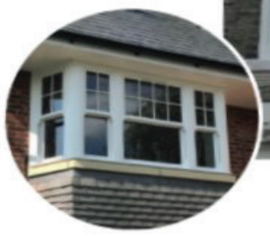

We offer a range of sash window styles to match your old windows as closely as possible and maintain the signature "design statement" for your home.

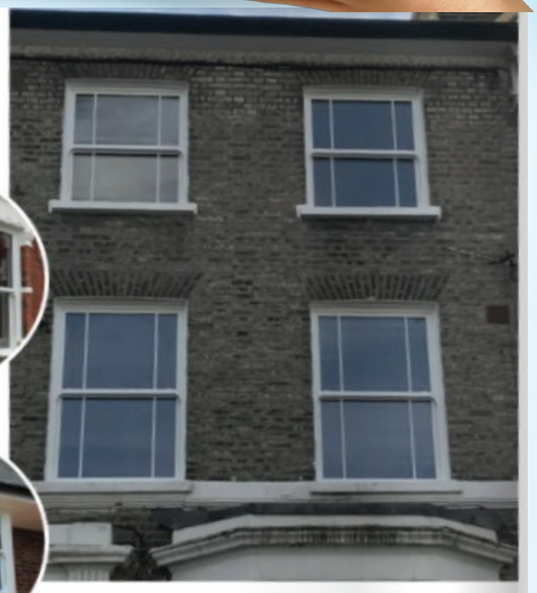

We can replace bay-style windows including splay and box bay windows. These are a common feature in older properties and when combined with a sliding sash window the installed appearance is very impressive.

We can also replace arched and swept head windows. These shaped styles are incredibly eye-catching. **ECOSlide** PVC-U sash windows are bespoke-manufactured to your exact requirements, to maintain the appealing charm of your home.

Other additional design options are available with internal Georgian Bar or external Astragal Bar detailing, to ensure your new windows are truly authentic in style.

SASH WINDOWS

PRODUCT DESCRIPTION

SASH windows are dedicated mainly to the English and US markets. In Poland, such type of joinery is mainly used in windows of gastronomical establishments.

SASH windows are characterized by an up-down opening method. Both sashes are placed on rails enabling sliding both lower and upper sash. It is possible to divide the window asymmetrically.

We manufacture all English windows basing on systems and fittings of renowned English companies used in Great Britain. We always take into account suggestions and requirements of our Clients resulting from specifics of foreign markets and their needs.

All required elements of window fittings are agreed individually with each Client.

PROFILE CROSS-SECTION

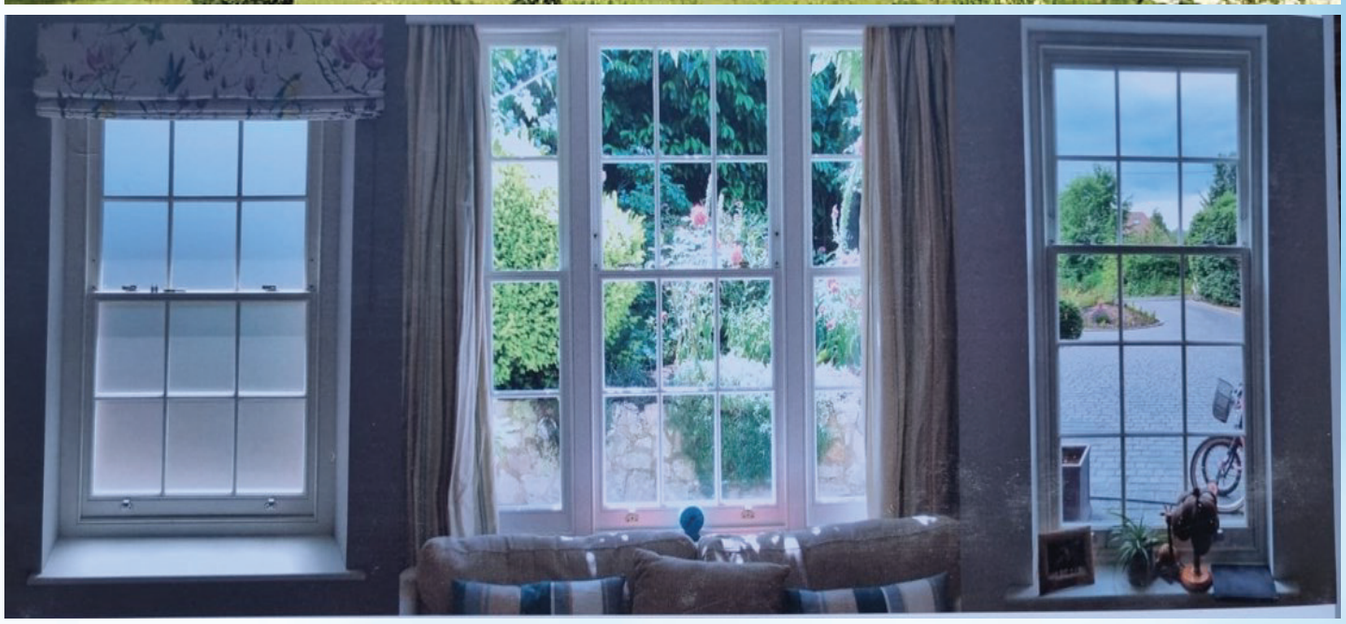

1. Durable varnish layer – Sikkens ecological water based paints – **excellent protection and beautiful surface of wood for many years**
2. **Double panel** 4x16x4mm o współczynniku przenikalności cieplnej U_g=1,1 W/m^{2}K wypełniony argonem
3. Ciepła ramka dystansowa- **redukcja kondensacji pary wodnej na wewnętrznej stronie okna**
4. Skrzydło okienne o grubości **56 mm**
5. **2 uszczelki** o podwyższonym okresie użytkowania - **szczelność okna, ciepło i dobra izolacja akustyczna**
6. Wysokiej klasy drewno 3- warstwowo klejone sosnowe, meranti lub inne na zamówienie - **gwarantowana stabilność konstrukcji**
7. Rama okienna o grubości **166 mm**

About us

Ian Dunne is my name and I am the Managing Director of Dunne Eco, a 3rd generation company that I started after my father passed away in 2014. With a background in innovation and business spanning over 35 years - I am a former director of Dunne's Workshop – Ireland's oldest joinery (http://dunnesworkshop.net/).

We here at Dunne Eco Really feel passionate about the stairs windows and Doors.

We truly believe that you will be very impressed with our costings

Many thanks for taking the time to go through this brochure

Kind Regards

Ian Dunne
